Thank you for buying the original RODRIG for your Packraft.  
This is the world's first and lightest rodholder specially designed for Packrafts. It has become very popular by fishermen who want to use their packraft for both flyfishing and trolling. If both rod types are used it can be advantageous to use a telescopic rod for trolling. This new Model II, 2019 is lighter, more robust and easier to mount than previous model. Handmade in Norway and weight only 210g.

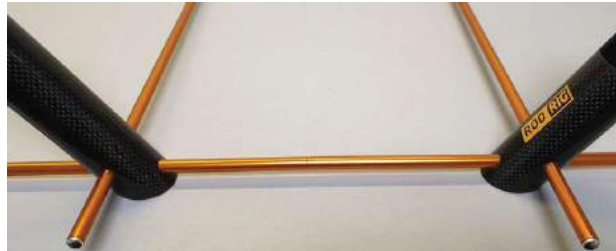

1. RODRIG consists of the following parts:
  - 2 pcs. carbon rod holders. The one with the recess is designed for fly rod but can also be used for trolling rod.
  - 1 pcs. Aluminum crossbar
  - 2 pcs. Aluminum forward support bar

2. Rod holders are first mounted on the crossbar as shown in the picture. One or both rod holders can be used.

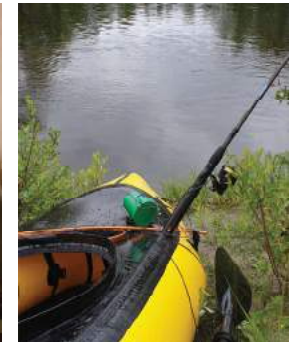

3. The two shorter rods should be mounted through the upper holes and through the front loops on the boat. The air pressure in the boat holds the RODRIG in place.

4. The crossbar is first inserted into the rear fastening loops. Then, the support rod is inserted through the rod holder and pushed through the front fastening loop.

5. The distance between the rod holders can be easily adjusted by sliding them on the crossbar to fit your backpack.

6. Fishing can begin with one or two rods. Remember to secure your rod to the packraft! Happy fishing!
